

PA 63 Amplified PA System

So you're looking for a great sounding PA system with a headset or possibly a wireless mic, but you don't' want to break the bank. The PA 63 is the little brother of our popular PA 64 and uses the same 4 x 50W amplifier, so it comes with all the performance and the basic features you need.

It connects to any stereo factory or aftermarket so it's prefect for vans, mini busses and accepts all our microphones from hand held to headset, wired to wireless. Let the PA 63 introduce you to the performance, quality and support of Ready2Talk.

If you need to upgrade your existing PA system, we have wire to wire diagrams and the support to show you how, just give us a call.
